---

**You will find here some utilities created to facilitate the writing work.**

## **MakeDoc2**

Version : 2.5.6 of january 2005

This is the official EBOL Technologies version of MakeDoc. It is used for the creation of documentation.

This easy to use script allows you to focus on the words, not on the format. We use it as the official project documentation format.

More detailed documentation can be found on RT website : <http://www.rebol.net/docs/makedoc.html>.

	ZIP file containing the .r script et encapsulated version .exe (for Windows).
--	---

## **MakeDoc2-SPIP**

Version : 1.2 of 25 may 2005

Same utility as above, but this one allows you to choose between plain HTML as output format, and SPIP markup format. The last is the CMS we are using for managing this project.

Using the SPIP-format make it easy to publish articles, which are perfectly integrated to our CMS.

Please note that this version is not an official RT product, but a script internally developed.

	ZIP file containing the .r script et encapsulated version .exe (for Windows).
